

Simplified Procedure of Home-Visit Bathing Long-Term Care

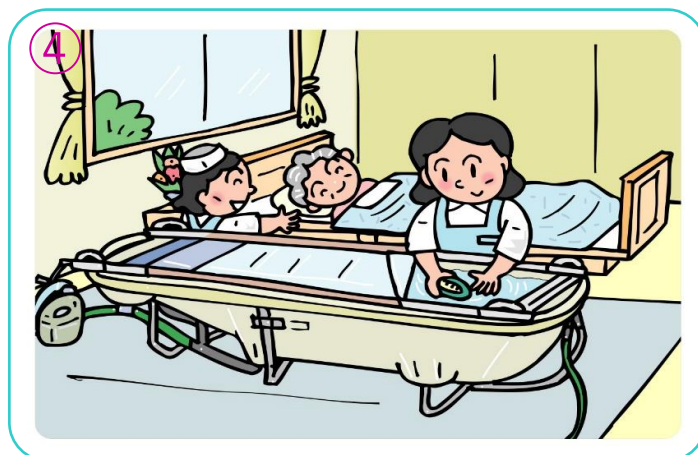

Three staff members, a nurse, a helper, and an operator will visit the user on the date and time depending on a request when they get ready.

A nurse visits the user and measures blood pressure, temperature, the pulse and performs the right or wrong judgment of the bathing of the day.

We install a bathtub near a bed and prepare for the bathing. Because we spread a bathtub sheet, we may not get a floor (tatami mat) wet.

Well, let's supply some hot water to a bathtub and we will check the temperature of the hot water. We are ready for the bathing care.

A time of the bathing the user has been waiting for. It is time to feel "a day of the joy".

After bathing, please take a shower to refresh yourself.
